DATE MAILED: 09/08/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	Application No. 10/032,245	Applicant(s) PEDERSEN, CHRISTEN K.	
	Examiner Sean Reilly	Art Unit 2153	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 13 June 2006.
- 2a) ☒ This action is **FINAL**.                      2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) ☒ Claim(s) 1-36 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-36 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### DETAILED ACTION

This Office action is in response to Applicant's amendment and request for reconsideration filed on June 13, 2006. Claims 1-36 are presented for further examination. All independent claims have been amended.

#### *Response to Arguments*

Applicant contends that Blight failed to disclose the network connectivity information provides information *pertaining and unique* to a particular electronic device. Examiner respectfully disagrees. Examiner has equated Applicant's claimed network connectivity information to Blight's resource proxy which includes resource and gateway tables, see inter alia Col 10, lines 39-60). As admitted by Applicant and disclosed by Blight, the resource proxy maintains a list of resources available only to a particular electronic device (see inter alia Applicant response June 13, 2006, pg 15 1<sup>st</sup> ¶ "the resource proxy stores information pertaining to remotely located devices that are available for communication" and Blight Col 10, lines 22-33). Thus, Blight's network connectivity information (i.e. resource proxy tables) clearly *pertains to and is unique to* the particular electronic device since the list of resources is specific to that electronic device only.

Applicant also contends that Blight's connectivity information is not and cannot be universally used to establish communication between said associated electronic device and each of said other electronic devices. Applicant further states, "this is because the information pertains only to one remotely located resource, and can only be used to establish communication between the associated device and the remotely located resource" (Applicant response June 13,

Art Unit: 2153

2006, pg 17 2nd ¶). Examiner respectfully disagrees with this analysis. Applicant claims *network connectivity information* and Examiner has equated *network connectivity information* to Blight's resource proxy which includes a list of resources in the form of URLs available to the electronic device (Blight Col 11, lines 11-17 or Col 14, lines 61-67). According the claimed *network connectivity information* is equated to a list of resources such as a list of URLs and is not equated with a single resource or resource URL in the list, as Applicant appears to assert.

While Examiner agrees that one URL in the list only allows the electronic device to connect to one remote resource (as Applicant appears to assert in the above quote), Examiner does not agree that the connectivity information as a whole (i.e. each URL in the resource list) fails to allow the electronic device to connect to each of said other electronic devices. Again Applicant claims that said network connectivity information (i.e. Blight's list of available resources URLs) is universally used to establish communication between said associated electronic device and each of said other electronic devices. Clearly Blight's *complete list* of available resource URLs allows an electronic device to establish communication with each of said other electronic devices.

None of Applicant's arguments were persuasive. Accordingly the previous rejection set forth on March 9, 2006 is **MAINTAINED**.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2153

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

**1. Claims 1, 5-20 and 22-36 are rejected under 35 U.S.C. 102(e) as being anticipated by**

**Blight et al. (U.S. Patent 6,785,542; hereinafter Blight).**

**2. Regarding claim 1, Blight discloses a communication system comprising:**

- a communication network (Figure 6); and
- a plurality of electronic devices coupled to said communication network (Figure 6, e.g. 100d, 235a, 235b), each of said plurality of electronic devices including a selector for initiating a user initiated communication interface (resource proxy) that when enabled presents (e.g. user requests of available resources which are present in an HTML page, Col 14, lines 56-65) network connectivity information (Col 10, lines 39-60) specific to an associated electronic device implementing said communication interface (location based resources available to that mobile device, Col 10, lines 22-33), where said network connectivity information is necessary for establishing communication paths (e.g. a URL, see inter alia, Col 9, lines 58-62, Col 10, lines 65-68 or Col 14, 61-63) between said associated electronic device and other electronic devices coupled to said communication network (Col 3, lines 10-21), wherein said network connectivity information provides information pertaining and unique to said associated electronic device (i.e. the resources are location based resources available to that mobile device, Col 10, lines 22-33) and is universally used to establish communication between said associated electronic device and each of said other electronic devices (e.g. the system uses the resource URLs of each resource that are

technology independent (Col 9, lines 58-62) to establish communication between the electronic device and each resource, see inter alia, Col 9, lines 58-62, Col 10, lines 65-68 or Col 14, 61-63 and Col 15, lines 7-9).

3. Regarding claim 11, Blight discloses a method of connection comprising:

- providing a communication interface (resource proxy) on an electronic device coupled to a communication network that when initiated by a user provides to said user (e.g. HTML page of available resources, Col 14, lines 56-65) pertinent network connectivity information (e.g. a URL, see inter alia, Col 9, lines 58-62, Col 10, lines 65-68 or Col 14, 61-63) specific to said electronic device (location based resources available to that mobile device, Col 10, lines 22-33) necessary for establishing communication paths with other devices coupled to said communication network (Col 3, lines 10-21) wherein said network connectivity information provides information specific to said associated electronic device (i.e. the resources are location based resources available to that mobile device, Col 10, lines 22-33) and is generically used to establish communication between said associated electronic device and each of said other electronic devices (e.g. the system uses the resource URLs of each resource that are technology independent (Col 9, lines 58-62) to establish communication between the electronic device and each resource, see inter alia, Col 9, lines 58-62, Col 10, lines 65-68 or Col 14, 61-63 and Col 15, lines 7-9).
- Prompting through said communication interface for said user to provide through said communication interface said network connectivity information to establish a communication path through said communication network to a second electronic

Art Unit: 2153

device (i.e. the user selects a resource URL from the HTML page of available resource URLs and wherein the URL is used to establish a communication path; see inter alia, Col 14, line 56 - Col 16, line 9); and

- Prompting through said communication interface for said user to provide through said communication interface network connectivity information specific to said second electronic device to establish said communication path (i.e. the user selects a resource URL from the HTML page of available resource URLs and wherein the URL is used to establish a communication path; see inter alia, Col 14, line 56 - Col 16, line 9), wherein said network connectivity information specific to said second electronic device is generically used to establish communication between said second electronic device and any device coupled to said communication network (e.g. the system uses the resource URLs of each resource that are technology independent (Col 9, lines 58-62) to establish communication between the electronic device and each resource, see inter alia, Col 9, lines 58-62, Col 10, lines 65-68 or Col 14, 61-63 and Col 15, lines 7-9).

4. Regarding claim 19, Blight discloses a method of connection comprising:

- a) at a first electronic device, acknowledging the initiation of a communication interface by a user, said first electronic device coupled to a communication network (Col 16, lines 53-57);
- b) providing to said user (e.g. HTML page of available resources, Col 14, lines 56-65) network connectivity information for said first electronic device, said network connectivity information necessary for establishing communication paths to other

Art Unit: 2153

electronic devices coupled to said communication network (Col 14, lines 61-65; Col 15, lines 7-9) wherein said network connectivity information provides information specific to said associated electronic device (i.e. the resources are location based resources available to that mobile device, Col 10, lines 22-33) and is generically used to establish communication between said associated electronic device and each of said other electronic devices (e.g. the system uses the resource URLs of each resource that are technology independent (Col 9, lines 58-62) to establish communication between the electronic device and each resource, see inter alia, Col 9, lines 58-62, Col 10, lines 65-68 or Col 14, 61-63 and Col 15, lines 7-9).

5. Regarding claim 29, Blight discloses a computer system comprising:

- a processor (inherent); and
- a computer readable memory coupled to said processor and containing program instructions that, when executed, implement a method of connection comprising (inherent):
- providing a communication interface on an electronic device coupled to a communication network that when initiated by a user provides to said user (e.g. HTML page of available resources, Col 14, lines 56-65) pertinent network connectivity information specific to said electronic device (location based resources available to that mobile device, Col 10, lines 22-33) necessary for establishing communication paths with other devices coupled to said communication network (Col 3, lines 10-21) wherein said network connectivity information provides information specific to said associated electronic device (i.e. the resources are location based

resources available to that mobile device, Col 10, lines 22-33) and is generically used to establish communication between said associated electronic device and each of said other electronic devices (e.g. the system uses the resource URLs of each resource that are technology independent (Col 9, lines 58-62) to establish communication between the electronic device and each resource, see inter alia, Col 9, lines 58-62, Col 10, lines 65-68 or Col 14, 61-63 and Col 15, lines 7-9).

6. Regarding claim 5, Blight discloses one of said plurality of electronic devices is a mobile device (Col 3, line 11).
7. Regarding claim 6, Blight discloses one of said plurality of electronic devices is a personal digital assistant (PDA) (Col 2, line 49).
8. Regarding claims 7 and 22-23, Blight discloses the communication system wherein said selector is a button (Button – Col 6, lines 17-20; for selection - Col 14, lines 61-65 and Col 15, lines 7-9).
9. Regarding claims 8 and 24, Blight discloses said selector is a software enabled selector located on a display of associated electronic devices (Col 14, lines 61-65; Col 15, lines 7-9).
10. Regarding claim 9, Blight discloses each of said plurality of electronic devices comprise a graphical user interface (Col 6, line 6) for assisting users to establish said communication paths over said communication network (Col 14, lines 61-65; Col 15, lines 7-9).
11. Regarding claim 10, Blight discloses said communication network is a wide area network (Col 9, lines 4-11).
12. Regarding claims 12 and 30, Blight discloses the method of connection as described in claim 11, further comprising:

Art Unit: 2153

- providing said communication interface universally on a plurality of electronic devices coupled to said communication network (Col 10, lines 16-19); and
- providing pertinent network connectivity information for electronic devices upon initiating their respective communication interfaces for establishing said communication paths with other devices coupled to said communication network (Col 14, lines 61-65).

13. Regarding claims 13 and 31, Blight discloses automatically establishing a communication path between a first and second electronic device when their associated first and second communication interfaces, respectively, have been initiated under a condition (Selecting to make such a connection Col 15, lines 7-9 and inherently accepting the connection on the other end).

14. Regarding claims 14 and 32, Blight discloses said condition is initiating said first and second communication interfaces within a period of time. It is inherent that such a connection establishment must occur in a given time period.

15. Regarding claims 15 and 33, Blight discloses said condition is initiating said first and second communication interfaces within a geographical location (Col 8, line 64 – Col 9, line 1).

16. Regarding claims 16 and 34, Blight discloses said network connectivity information is a device identification (ID) (Col 10, lines 52-53).

17. Regarding claims 17, 25, and 35 Blight discloses assisting said user of said electronic device through a graphical user interface to establish a communication path between said electronic device and a second electronic device chosen by said user, said second electronic device located on said communication network (Col 14, lines 61-65; Col 15, lines 7-9).

Art Unit: 2153

18. Regarding claims 18, 26, and 36, Blight discloses providing a set of possible connections to other known devices located on said communication network for selection by said user (Col 14, lines 61-65; Col 15, lines 7-9).

19. Regarding claim 20, Blight discloses providing said network connectivity information on a display of said electronic device (Col 14, lines 61-65).

20. Regarding claim 27, Blight discloses prompting said user of said electronic device for other network connectivity information from said second electronic device obtained by initiating a second communication interface at said second electronic device (Col 16, lines 37-52).

21. Regarding claim 28, Blight discloses said network connectivity information is an internet protocol (IP) address (Col 16, line 67).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**22. Claims 2-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blight et al. (U.S. Patent 6,785,542; hereinafter Blight) as applied above, and further in view of Gaucher (U.S. Patent Number 6,175,860).**

23. Regarding claim 2, Blight discloses a communication interface for monitoring initiations of said communication interfaces by said plurality of electronic devices (Col 3, lines 10-21), and for establishing a communication path automatically between a first and second electronic device of

Art Unit: 2153

said plurality of electronic devices when their associated first and second communication interfaces, respectively, have been initiated under a condition (Col 14, lines 61-65; Selecting to make such a connection Col 15, lines 7-9 and accepting the connection on the other end). While Blight discloses the communication interface (resource proxy) of a given device centrally monitors initiations of said communication interfaces by said plurality of electronic devices, the monitoring communication interface functionality is not central (ie. one central server does not exist for monitoring all the devices; instead each electronic device monitors the entire network on its own). Nevertheless, centrally monitoring initiations of communication interfaces within a given network was well known in the art at the time of invention, as evidenced by Gaucher. In a related art, Gaucher discloses a central server (master computer) (Col 2, lines 49-56), which monitors initiations of communication interfaces (appliance boxes) (Col 3, lines 24-27). It would have been obvious to one of ordinary skill in the art at the time of invention to modify the system of Blight to use a central server for monitoring initiations of communication interfaces, as disclosed by Gaucher, since such a scheme is simple in setup, operation and cost (Gaucher Col 2, lines 18-19).

24. Regarding claims 3-4, the limitations of claims 3 and 4 are similarly drawn to the limitations of claims 14 and 15, respectfully, thus they are rejected using similar rational.

**25. Claim 21 is rejected under 35 U.S.C. 103(a) as being unpatentable over Blight et al. (U.S. Patent 6,785,542; hereinafter Blight).**

26. Regarding claim 19, as discussed above Blight discloses providing network connectivity information for said first electronic device, said network connectivity information necessary for

Art Unit: 2153

establishing communication paths to other electronic devices coupled to said communication network (Col 14, lines 61-65; Col 15, lines 7-9). Blight further discloses providing such information in the form of a webpage (Col 14, lines 56-65). The Examiner takes Official Notice that it was well known in the art at the time of invention to print webpages, thereby generating a hard copy of the webpage. It would have been obvious to one of ordinary skill in the art at the time of invention to print the network connectivity information generated in webpage form by Blight's system in order to allow the connectivity information to be viewed without the use of an electronic device.

### *Conclusion*

27. The prior art made of record, in PTO-892 form, and not relied upon is considered pertinent to applicant's disclosure.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

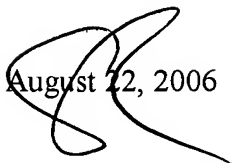

Art Unit: 2153

however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sean Reilly whose telephone number is 571-272-4228. The examiner can normally be reached on M-F 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glen Burgess can be reached on 571-272-3949. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
